There are many other books on the subject, I know I have them all, but take it from a herpetologist who works with these guys, this is the best one. Great basic descriptions of species, behavior, physiology, attacks on humans, pred-prey relations, mating and baby gator rearing. Wonderful pics, appropriate for kids and adults. Written by a series of experts in their fields for the broadest possible audience.

i dare say that unless you were at a university library,you would be hard pressed to find a book that is so,and i mean so informative on the subject! if you love Alligators as much as i do or if you are a Crocodile lover or just love all crocodilians,then this book is for you!

"Crocodiles and Alligators", by Stephen Garnett is a superb in-depth and exciting collection of prints, photos, charts, and extremely well written information on the world and genre of the Crocodilians and their sub-species.I first became infatuated with those great massive lizards as a youngster when I saw some of those old 1950's and early 60's Tarzan films, and African "White Hunter" movies like "Mogambo" and others. The film makers would always dub in some unrelated footage of

crocodiles running off the muddy banks and sliding into the dark brown rivers. These shots were used to enhance the movies sense of reality. This book brings those crocodiles and alligators out of the "black lagoons" and puts them up close and personal to the reader. This fine collection of information is suitable for the entire family from ages 8 to 80. If, you can catch a copy of it, then I highly recommend you pull it on board before it gets away

If you want the most information about the greatest number of crocodilian species, then this is the book! It's coffee-table size, has great photographs and drawings, and has provided more information than the sum of all my other resources.

Yes it did thank you for everything
